substitution cipher. Keys are given as permutations over symbol alphabet Σ .

$$|\Sigma| = m$$

$\Rightarrow m!$ permutations, i.e., $m!$ keys

b.) affine ciphers with 26 symbols in

$$\text{alphabet } c_i = a \cdot m_i + b \pmod{26}$$

$$m_i = a^{-1}(c_i - b) \pmod{26}$$

$\Rightarrow a^{-1}$ has to exist for decryption

before: a^{-1} exists, if $\gcd(a, 26) = 1$

$$26 = 2 \cdot 13 \Rightarrow S = \{a \mid \gcd(a, 26) = 1\} \\ = \{a \mid 2 \nmid a \wedge 13 \nmid a\} \subset \mathbb{Z}_{26}$$

$$\Rightarrow |S| = |\mathbb{Z}_{26}^*| = \frac{26}{2} - 1 = \underline{12}$$

No restriction for b
